The Technological Evolution

Mainframes

- Localized infrastructure
- Filled a room or two
- Central Processing
- No local compute

1960's

Client/Server Architecture

- Decentralized Computing
- Client machines connecting to Servers
- Local Compute
- Dot Com revolution

1980's

Private Cloud

- Large pools of On-premises compute resources with cloud attributes (elasticity, scale, and automation)
- Remote access

Early 2000's

Public Cloud

- Global reach
- Indefinite scale*
- XaaS revolution
- Collaborative computing
- Metered usage

Late 2000's

What is Cloud?

- Shared pool of resources (servers)
- Running software (applications/datastores/etc.)
 - Hosted in Data Centers
 - Globally distributed
 - Accessible over Internet
 - Metered usage
- Mostly offered as Pay As You Go (PAYG)
